Quality ID #111: Pneumococcal Vaccination Status for Older Adults
– National Quality Strategy Domain: Community/Population Health
– Meaningful Measure Area: Preventive Care

2019 COLLECTION TYPE:
MEDICARE PART B CLAIMS

MEASURE TYPE:
Process

DESCRIPTION:
Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine

INSTRUCTIONS:
This measure is to be submitted a minimum of once per performance period for patients seen during the performance period. There is no diagnosis associated with this measure. Performance for this measure is not limited to the performance period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on services provided and the measure-specific denominator coding.

Measure Submission Type:
Measure data may be submitted by individual MIPS eligible clinicians using Medicare Part B claims. The listed denominator criteria are used to identify the intended patient population. The numerator quality-data codes included in this specification are used to submit the quality actions allowed by the measure on the claim form(s). All measure-specific coding should be submitted on the claim(s) representing the denominator eligible encounter and selected numerator option.

DENOMINATOR:
Patients 65 years of age and older with a visit during the measurement period

DENOMINATOR NOTE: This measure assesses whether patients 65 years of age or older have received one or more pneumococcal vaccinations.

Denominator Criteria (Eligible Cases):
Patients aged ≥ 65 years on date of encounter
AND
Patient encounter during the performance period (CPT or HCPCS): 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350, G0402, G0438, G0439

NUMERATOR:
Patients who have ever received a pneumococcal vaccination

NUMERATOR NOTE: While the measure provides credit for adults 65 years of age and older who have ever received either the PCV13 or PPSV23 vaccine (or both), according to ACIP recommendations, patients should receive both vaccines. The order and timing of the vaccinations depends on certain patient characteristics, and are described in more detail in the ACIP recommendations.

Numerator Quality-Data Coding Options:
Patient receiving Hospice Services, Patient Not Eligible:
Denominator Exclusion: G9707: Patient received hospice services any time during the measurement period

OR
Pneumococcal Vaccination Administered or Previously Received

**Performance Met:** CPT II 4040F: Pneumococcal vaccine administered or previously received

**OR**

Pneumococcal Vaccination not Administered or Previously Received, Reason not Otherwise Specified

Append a submission modifier (8P) to CPT Category II code 4040F to submit circumstances when the action described in the numerator is not performed and the reason is not otherwise specified.

**Performance Not Met:** 4040F with 8P: Pneumococcal vaccine was not administered or previously received, reason not otherwise specified

**RATIONALE:**

Pneumonia is a common cause of illness and death in the elderly and persons with certain underlying conditions such as heart failure, diabetes, cystic fibrosis, asthma, sickle cell anemia, or chronic obstructive pulmonary disease (NHLBI, 2011). In 1998, an estimated 3,400 adults aged > 65 years died as a result of invasive pneumococcal disease (IPD) (CDC, 2003).

Among the 91.5 million US adults aged > 50 years, 29,500 cases of IPD, 502,600 cases of nonbacteremic pneumococcal pneumonia and 25,400 pneumococcal-related deaths are estimated to occur yearly; annual direct and indirect costs are estimated to total $3.7 billion and $1.8 billion, respectively. Pneumococcal disease remains a substantial burden among older US adults, despite increased coverage with 23-valent pneumococcal polysaccharide vaccine, (PPV23) and indirect benefits afforded by PCV7 vaccination of young children (Weycker, et al., 2011).

Vaccination has been found to be effective against bacteremic cases (OR: 0.34; 95% CI: 0.27–0.66) as well as nonbacteremic cases (OR: 0.58; 95% CI: 0.39–0.86). Vaccine effectiveness was highest against bacteremic infections caused by vaccine types (OR: 0.24; 95% CI: 0.09–0.66) (Vila-Corcoles, et al., 2009).

**CLINICAL RECOMMENDATION STATEMENTS:**

In 2014, the Advisory Committee on Immunization Practices (ACIP) began recommending a dose of 13-valent pneumococcal conjugate vaccine (PCV13) be followed by a dose of 23-valent pneumococcal polysaccharide vaccine (PPSV23) 6-12 months later in adults aged 65 and older who have not previously received a pneumococcal vaccination, and in persons over the age of two years who are considered to be at higher risk for pneumococcal disease due to an underlying condition. The two vaccines should not be coadministered and intervals for administration of the two vaccines vary slightly depending on the age, risk group, and history of vaccination (Kobayashi, 2015).

In 2015, ACIP updated its recommendation and changed the interval between PCV13 and PPSV23, from 6-12 months to at least one year for immunocompetent adults aged >=65 years who have not previously received pneumococcal vaccine. For immunocompromised vaccine-naive adults, the minimum acceptable interval between PCV13 and PPSV23 is 8 weeks. Both immunocompetent and immunocompromised adults aged >=65 years who have previously received a dose of PPSV23 when over the age of 65 should receive a dose of PCV13 at least one year after PPSV23 (>=1 year). Immunocompetent and immunocompromised adults aged >=65 who have previously received a dose of PPSV23 when under the age of 65, should also receive a dose of PCV13 at least one year after PPSV23 (>=1 year) and then another dose of PPSV23 at least one year after PCV13. It is recommended that for those that have this alternative three-dose schedule (2 PPSV23 and 1 PCV13), the three doses should be spread over a time period of five or more years (Kobayashi, 2015).

2019 Medicare Part B Claims Flow for Quality ID #111: Pneumococcal Vaccination Status for Older Adults

Denominator

Start

Patient Age on Date of Service ≥ 65 Years

No

Not Included in Eligible Population/Denominator

Yes

Encounter as Listed in Denominator* (1/1/2019 thru 12/31/19)

No

Include in Eligible Population/Denominator (80 Patients)

Yes

Numerator

Patient Received Hospice Services Any Time During the Measurement Period

Yes

Data Completeness Met + Denominator Exclusion (0 Patients) x

Pneumococcal Vaccination Administered or Previously Received

No

Data Completeness Met + Performance Not Met 4640F-80 (40 Patients) c

Yes

Pneumococcal Vaccination Not Administered or Previously Received Reason Not Otherwise Specified

No

Data Completeness Met + Performance Met 4640F (30 Patients) a

Yes

Data Completeness Not Met Quality Data Code Not Submitted (10 Patients)

SAMPLE CALCULATIONS:

Data Completeness = Denominator Exclusion (x=0 patients) + Performance Met (a=30 patients) + Performance Not Met (c=40 patients) = 70 patients = 87.50%

Eligible Population / Denominator (d=80 patients)

Performance Rate = Performance Met (a=30 patients) = 30 patients = 42.86%

Data Completeness Numerator (70 patients) - Denominator Exclusion (x=0 patients) = 70 patients

* See the posted Measure Specification for specific coding and instructions to submit this measure.
NOTE: Submission Frequency: Patient process
NOTE: Diagram has not been reviewed by the measure steward. This diagram should be used in place of the measure specification but may be used as an additional resource.

2019 Medicare Part B Claims Flow Narrative for Quality ID #111:
Pneumococcal Vaccination Status for Older Adults

Please refer to the specific section of the specification to identify the denominator and numerator information for use in submitting this Individual Specification.

1. Start with Denominator

2. Check Patient Age:
   a. If Patient Age is greater than or equal to 65 Years on Date of Service equals No during the measurement period, do not include in Eligible Population. Stop Processing.
   b. If Patient Age is greater than or equal to 65 Years on Date of Service equals Yes during the measurement period, proceed to check Encounter Performed.

3. Check Encounter Performed:
   a. If Encounter as Listed in the Denominator equals No, do not include in Eligible Population. Stop Processing.
   b. If Encounter as Listed in the Denominator equals Yes, include in Eligible Population.

4. Denominator Population:
   a. Denominator Population is all Eligible Patients in the Denominator. Denominator is represented as Denominator in the Sample Calculation listed at the end of this document. Letter d equals 80 patients in the Sample Calculation.

5. Start Numerator

6. Check Patient Received Hospice Services Any Time During the Measurement Period:
   a. If Patient Received Hospice Services Any Time During the Measurement Period equals Yes, include in Data Completeness Met and Denominator Exclusion.
   b. Data Completeness Met and Denominator Exclusion letter is represented as Data Completeness and Performance Rate in the Sample Calculation listed at the end of this document. Letter x equals 0 patients in the Sample Calculation.
   c. If Patient Received Hospice Services Any Time During the Measurement Period equals No, proceed to check Pneumococcal Vaccination Administered or Previously Received.

7. Check Pneumococcal Vaccination Administered or Previously Received:
   a. If Pneumococcal Vaccination Administered or Previously Received equals Yes, include in Data Completeness Met and Performance Met.
   b. Data Completeness Met and Performance Met letter is represented as Data Completeness and Performance Rate in the Sample Calculation listed at the end of this document. Letter a equals 30 patients in the Sample Calculation.
   c. If Pneumococcal Vaccination Administered or Previously Received equals No, proceed to check Pneumococcal Vaccination Not Administered or Previously Received, Reason Not Otherwise Specified.

8. Check Pneumococcal Vaccination Not Administered or Previously Received, Reason Not Otherwise Specified:
   a. If Pneumococcal Vaccination Not Administered or Previously Received, Reason Not Otherwise Specified equals Yes, include in Data Completeness Met and Performance Not Met.
b. Data Completeness Met and Performance Not Met letter is represented as Data Completeness in the Sample Calculation listed at the end of this document. Letter c equals 40 patients in the Sample Calculation.

c. If Pneumococcal Vaccination Not Administered or Previously Received, Reason Not Otherwise Specified equals No, proceed to check Data Completeness Not Met.

9. Check Data Completeness Not Met:

a. If Data Completeness Not Met, the Quality Data Code was not submitted. 10 patients have been subtracted from the Data Completeness Numerator in the Sample Calculation.
