

Quality ID #418 (CBE 0053): Osteoporosis Management in Women Who Had a Fracture

2025 COLLECTION TYPE: **MEDICARE PART B CLAIMS**

MEASURE TYPE: Process

DESCRIPTION:

The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the 180 days after the fracture.

INSTRUCTIONS:

This measure is to be submitted after **each occurrence** of a fracture during the six months prior to the performance period through June 30 of the performance period. It is anticipated that Merit-based Incentive Payment System (MIPS) eligible clinicians who treat any fracture except fractures of the finger, toe, face or skull will submit this measure. Each occurrence of a fracture is identified by either an ICD-10-CM diagnosis code for fracture and a CPT service code OR an ICD-10-CM diagnosis code for a fracture and a CPT procedure code for surgical treatment of fractures.

NOTE: Patients with any fracture except fractures of the finger, toe, face or skull should have a bone mineral density (BMD) measurement performed or pharmacologic therapy prescribed. The management (BMD performed or pharmacologic therapy prescribed) should occur within 180 days of the fracture. If multiple fractures occurring on the same date of service are submitted on the same claim form, only one instance of submission will be counted. Claims data will be analyzed to determine unique occurrences. Patients already receiving pharmacologic therapy would automatically meet the intent of this measure.

NOTE: Patient encounters for this measure conducted via telehealth (including but not limited to encounters coded with GQ, GT, POS 02, POS 10) are allowable. Please note that effective January 1, 2025, while a measure may be denoted as telehealth eligible, specific denominator codes within the encounter may no longer be eligible due to changes outlined in the CY 2024 PFS Final Rule List of Medicare Telehealth Services.

Measure Submission Type:

Measure data may be submitted by individual MIPS eligible clinicians using Medicare Part B claims. The listed denominator criteria are used to identify the intended patient population. The numerator quality data codes included in this specification are used to submit the quality actions allowed by the measure on the claim form(s). All measure-specific coding should be submitted on the claim(s) representing the denominator eligible encounter and selected numerator option.

The intent of the exclusion for individuals age 66 and older residing in long-term care facilities, including nursing homes, is to exclude individuals who may have limited life expectancy and increased frailty where the benefit of the process may not exceed the risks. This exclusion is not intended as a clinical recommendation regarding whether the measures process is inappropriate for specific populations, instead the exclusions allows clinicians to engage in shared decision making with patients about the benefits and risks of screening when an individual has limited life expectancy.

DENOMINATOR:

Women who experienced a fracture, except fractures of the finger, toe, face or skull, during the six months prior to the performance period through June 30 of the performance period

DENOMINATOR NOTE: *Signifies that this CPT Category I code is a non-covered service under the Medicare Part B Physician Fee Schedule (PFS). These non-covered services will not be counted in the denominator population for Medicare Part B claims measures.

Option 1 - Denominator Criteria (Eligible Cases):

Patients aged 50-85 years on date of encounter

NUMERATOR:

Patients who received either a bone mineral density test or a prescription for a drug to treat osteoporosis in the 180 days after the fracture

Definitions:

Pharmacologic Therapy – U.S. Food and Drug Administration approved pharmacologic options for osteoporosis prevention and/or treatment of postmenopausal osteoporosis include: bisphosphonates, alendronate, alendronate-cholecalciferol, ibandronate, risedronate, zoledronic acid, teriparatide, denosumab, abaloparatide, romosozumab and raloxifene.

Prescribed – May include prescription given to the patient for treatment of osteoporosis (as listed above) at one or more encounters during the performance period, or documentation that patient is already taking pharmacologic therapy for osteoporosis, as documented in the current medication list.

Bone Mineral Density (BMD) – A bone density test is an examination by either special x-rays or ultrasound to determine how much bone mineral content (calcium and other minerals) is present in any section of bone.

NUMERATOR NOTE: While the Central Dual Energy X-Ray Absorptiometry (DXA) is the most common measurement for measuring bone mineral density (BMD), for the purposes of submitting this measure, spinal densitometry X-ray, ultrasonography for densitometry, CT bone density axial and Peripheral Dual-energy X-Ray Absorptiometry (DXA) would meet performance and the intent of the measure and **3095F** would be submitted.

To assess the age for exclusions, the patient's age on the date of the encounter should be used.

RATIONALE:

Osteoporosis is the most common metabolic bone disease and is characterized by low bone mineral density and structural deterioration of bone tissue, causing bone fragility and increasing the risk of fractures (National Institute of Health, 2017). It is estimated that by 2020, approximately 11.9 million people age 50 and older will have osteoporosis (Wright et al., 2014). Osteoporosis affects about 25% of women age 65 and older (Looker et al., 2017).

The cost of osteoporosis-related fractures to patients, families and the health care system is \$19 billion annually. Experts predict that by 2025 osteoporosis will be responsible for 3 million fractures annually, resulting in \$25.3 billion in costs (National Osteoporosis Foundation, 2015). The aging U.S. population is likely to increase the financial cost of osteoporosis care.

Each year, there are approximately 1.5 million osteoporotic fractures in the United States (Black & Rosen, 2016). Fragility fractures (fractures from falls from a standing position) are considered one of the most serious warning signs of osteoporosis or low bone density. Individuals who experience a fragility fracture have a 1.5- to 9.5-fold increased risk of further fracture (Posen et al., 2013). Osteoporosis related fractures can occur in the hip, vertebrae, shin, and other bones. Hip fractures have been linked to lower quality of life, increased mortality and a dependent living status (Posen et al., 2013). A review of the Health and Retirement Study (study period between 1992 and 2010) indicated that 27% of adults age 50 and older died 1 year after a hip fracture (Cenzer et al., 2016).

Pharmacologic treatment can reduce the risk of subsequent fractures by 30%–50%. Unfortunately, testing and treatment for low bone mass after fracture has been shown to be as low as 20% (National Institute of Health, 2017). This and other research suggests a large opportunity for organizations to improve how well they manage women at an increased risk for fracture. The organization can improve its performance on this measure by both educating practitioners on follow-up care after fracture and by tracking administrative data for the occurrence of fracture and following up to ensure that appropriate care was provided.

CLINICAL RECOMMENDATION STATEMENTS:

The U.S. Preventive Services Task Force (USPSTF) recommends screening for osteoporosis with bone measurement testing to prevent osteoporotic fractures in women 65 years and older (Grade B) (USPSTF 2018).

This recommendation applies to older adults without a history of low-trauma fractures and without conditions that may cause secondary osteoporosis (such as metabolic bone disease or untreated hyperthyroidism) and patients without conditions that may increase their risk of falls. This recommendation does not apply to persons who take long-term medications that may cause secondary osteoporosis (e.g., glucocorticoids, aromatase inhibitors, or gonadotropin-releasing hormone agonists). The USPSTF recommends screening for osteoporosis with bone measurement testing to prevent osteoporotic fractures in postmenopausal women younger than 65 years who are at increased risk of osteoporosis, as determined by a formal clinical risk assessment tool (Grade B) (USPSTF 2018).

Sample Calculations

Data Completeness equals Denominator Exclusion (x^1 through x^7 equals 20 episodes) plus Performance Met (a^1 plus a^2 equals 40 episodes) plus Performance Not Met (c^1 plus c^2 equals 30 episodes) divided by Eligible Population/Denominator (d equals 100 episodes). All equals 90 episodes divided by 100 episodes. All equals 90.00 percent.

Performance Rate equals Performance Met (a^1 plus a^2 equals 40 episodes) divided by Data Completeness Numerator (90 episodes) minus Denominator Exclusion (x^1 through x^7 equals 20 episodes). All equals 40 episodes divided by 70 episodes. All equals 57.14 percent.
